(54) Title: RADIO TRANSMITTER WITH ACCURATE POWER CONTROL

(57) Abstract: A radio transmission power control circuit includes a radio frequency (rf) downconverter that produces a downcon-
verter output representative of the difference between a first downconverter input based on a transmitted signal of a radio transmitter
and a second downconverter input based on a local oscillator signal. A receiver baseband circuit processes the downconverter output
to produce an analog power signal representative of the transmitted signal. A digital to analog converter converts the analog power
signal to a representative digital power signal. A feedback control circuit produces a transmitter gain control signal to control trans-
mitted signal power so as to minimize the difference between the digital power signal and a power reference signal.

* Special categories of cited documents:

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- *G* document member of the same patent family
